

UR — True Cloud Migration v1

UR · revision r1 · CONFIRMED · confirmed by trial at 2026-08-16T02:10:57.102070
project True Cloud Migration · generated 2026-08-16T02:10:57.196146+00:00 · baseline True Cloud Migration v1.0

1. Project Purpose

[ur_purpose](#)

Deliver high-level and detailed design plus as-built documentation and migrations for the TRUE CLOUD MIGRATION program.

2. Business / Transformation Context

[ur_context](#)

Customer SOW defines two tracks: Landing Zone / Foundational Services and Mass Migration Factory.

3. Scope

[ur_scope](#)

Track 1 foundational landing zone and core services; Track 2 mass migration factory and pilot.

4. Track 1 Scope

[ur_track1](#)

Legacy Zone HLD/LLD, as-built, core infrastructure services (AD/DNS/firewall/Jump Host/CyberArk), connectivity assessment.

5. Track 2 Scope

[ur_track2](#)

Migration factory design, network foundation as-built, MGN agent enablement, pilot verification, runbooks.

6. Functional / Infrastructure Requirements

[ur_functional](#)

Landing zone, legacy zone, core services, migration factory components.

7. Connectivity Requirements

[ur_connectivity](#)

AWS <-> on-premises, Direct Connect, AWS <-> Azure, AWS <-> GCP; private-path replication.

8. Security / Identity Requirements

[ur_security](#)

Security boundaries, firewall/security controls, AD, CyberArk target model.

9. Migration Requirements

[ur_migration](#)

Jump Host + CyberArk migration; MGN replication; migration waves and runbooks.

10. Verification Requirements

[ur_verification](#)

Pilot test report and verification summary confirming private-path behavior and health.

11. Documentation Deliverables

[ur_documentation](#)

HLD/LLD, as-built, design documents, runbooks, operational handover.

12. Operational Handover Requirements

[ur_handover](#)

Runbooks and operational handover for migration waves and factory execution.

13. Assumptions

[ur_assumptions](#)

See project memory — private-path migration intent; Thailand Region target.

14. Clarifications

[ur_clarifications](#)

Account/OU structure, CIDRs, Direct Connect bandwidth, pilot acceptance criteria (open).

15. Out of Scope

[ur_out_of_scope](#)

Application database design and customer APIs are not stated in the SOW (NOT_APPLICABLE).

16. Acceptance Expectations

[ur_acceptance](#)

Structured, traceable, reviewable, reproducible design package accepted by engineering.

17. Requirement Traceability

[ur_trace](#)

Each requirement traces to a UR section, DR section, architecture object, or flow.
